HRM Exam Module

Custom survey modules – Solution documentation draft v1.0

Indunil Ramadasa

Plan in brief

- PDA to be given a new section in HRM admin to define custom survey modules (referred as CSM section hereafter).
- CSM section, can have a list of designations, for creating custom survey modules, they can first select the relevant designation.
- When relevant designation is selected, they will see the list of custom survey sections, add/edit sections.
- Each section added along with a designation will be rendered as a separate page in survey form (wizard).
- Then they can select each section and add/edit questions. The UI will be almost same with exam section question definitions UI. UI components and code from exams module will be reused separately. Questions are added to sections unlike in exam module(in exams module questions saved independent from exams)

Database additions

- Following tables are suggested to be added, some of them are copies of exam used question meta.
